$$y = \sum_{m=1}^{M} x_{tm} w_m + n_t$$

 $x_{tm} \sim lyplace (0, b) = \frac{1}{2b} e^{-\frac{|x|}{b}}$

· At each step of the FFBS, all chains are fixed except one. Define the pseudoobservations:

$$y_t = y_t - \sum_{m' \neq m} x_t^{m'} \underline{w}^{m'}$$

· To apply the FFBS over the on-th chain, we need:

· We focus on computing p(\textit{g}_t | Stin)

POSTERIOR FOR Xtm

After sampling 15tm(t=s) for the m-th chain, we resample 1×tm(t=s) from the posterior. It 5tm=0, then xtm=0 w.p. 1. Otherwise, we need to sample xtm from

$$p\left(x_{tm} \mid s_{tm}=1, \frac{y}{y_t}\right)$$
 for $t=1,...,T$

$$P\left(X_{tm} \mid S_{tm} = 1, \widetilde{y}_{t}\right) \propto P\left(\widetilde{y}_{t} \mid X_{tm}, S_{tm} = 1\right) P\left(X_{tm} \mid S_{tm} = 1\right)$$

$$\propto e^{-\frac{1}{20\widetilde{y}^{2}}\left(\widetilde{y}_{t} - X_{tm} \underbrace{w^{in}}\right)^{T}\left(\widetilde{y}_{t} - X_{tm} \underbrace{w^{in}}\right)} e^{-\frac{|X_{tm}|}{b}}$$

$$\propto e^{-\frac{1}{20\widetilde{y}^{2}}\left(\widetilde{y}_{t} - X_{tm} \underbrace{w^{in}}\right)^{T}\left(\widetilde{y}_{t} - X_{tm} \underbrace{w^{in}}\right)} \left(e^{-\frac{X_{tm}}{b}}\underbrace{T\left(X_{tm} > 0\right)}\right)$$

$$+ e^{\frac{X_{tm}}{b}}\underbrace{T\left(X_{tm} < 0\right)}$$

$$P_r\left(X_{tm} \ge 0 \mid S_{tm} = 1, \widetilde{g}_t\right) \propto I_2$$
 $P_r\left(X_{tm} < 0 \mid S_{tm} = 1, \widetilde{g}_t\right) \propto I_3$

$$T_{1} \propto e^{\frac{1}{2\sigma_{12}^{2}} \mu_{12}^{2}} \left(1 - wormcdf\left(0, \mu_{12}, \sigma_{12}^{2}\right)\right) \stackrel{A}{=} \rho_{2}$$

$$T_{1} \propto e^{\frac{1}{2\sigma_{12}^{2}} \mu_{13}^{2}} \cdot wormcdf\left(0, \mu_{13}, \sigma_{13}^{2}\right) \stackrel{A}{=} \rho_{4}$$

We sample if Xton=0 or Xton<0 with probabilities:

$$\begin{cases} x_{ton} \ge 0 & \text{w.p.} & \frac{f_2}{P_3 + P_2} \\ x_{ton} < 0 & \text{w.p.} & \frac{f_3}{P_3 + P_2} \end{cases}$$

where Ps, P2 are defined in @

$$\frac{1}{\sqrt{2}} \left(\frac{1}{2} + x_{tm} | x_{t$$
